

Pressure sensor for connection to radio unit Models PEU-20 and PEU-21

WIKA data sheet PE 87.24

For further approvals,
see page 7

Applications

- Remote monitoring of the process pressure for non-critical applications in combination with model NETRIS®3 radio unit
- Industrial pressure measurement for gases and liquids
- Process industry: oil and gas, chemical and petrochemical industries, water and wastewater, power generation
- Pharmaceutical and hygienic industry, food industry

Special features

- IIoT-capable measuring instrument in combination with radio unit, model NETRIS®3
- Intrinsically safe version Ex i per ATEX, IECEx
- Measuring ranges from 0 ... 1 to 0 ... 1,600 bar [0 ... 15 to 0 ... 20,000 psi] as well as vacuum and compound measuring ranges

Pressure sensor for connection to radio unit, model PEU-20

Description

The model PEU-2x in combination with the model NETRIS®3 radio unit is used wherever web-based remote monitoring of the process pressure of liquids and gases is desired. Typical applications include mobile parts of plants or remote measuring locations. The connection to NETRIS®3 allows for cloud-based process and plant monitoring in industrial applications.

Via retrofit, machinery or moving parts can be configured smartly – without having to plan and document cable routing. Particularly when no continuous measurement is needed, cost advantages can be realised.

The pressure sensor enables simple condition monitoring. A temperature indication inside the case, in addition to the pressure value, reveals possible malfunctions due to wear or system faults at an early stage and thus reduces the risk of downtime and damage.

The PEU-2x pressure sensor is part of the WIKA IIoT solution. With this, WIKA offers a holistic solution for your digitalisation strategy.

Maximum working pressure	→ Corresponds to the upper measuring range value / measuring range full scale value
Overpressure limit	The overpressure limit is based on the measuring range. Depending on the selected process connection and the seal, restrictions in overpressure limit can result. Use of the instrument in the range between the upper measuring range value / measuring range full scale value and the overpressure limit is not considered normal operation and is only permissible for a short time.
